**Dry Cow Protocol**

1) Wear blue nitrile gloves while dry cow treating.

2) Predip all quarters beginning with front teats.

3) Wipe predip off after at least a 30 second contact time. Once again wipe front teats off first.

4) Strip and CMT score quarters.

5) Take sample for culturing.

6) Predip as with step 2.

7) Dry teats paying close attention to teat ends, front to back. If teat ends not thoroughly clean, use alcohol pads to remove dirt.

8) Insert dry cow tube and massage quarter. This time start with back teats first.

9) Insert **INTERNAL TEAT SEALANT** starting with back teats first.

10) Post dip all the teats with lactating cow dip.
